Name_____

Calculus 3.7 Optimization Worksheet

1) Find two real numbers whose sum is 30 and whose product is maximized.

2) Find two numbers whose difference is 50 and whose product is minimized.

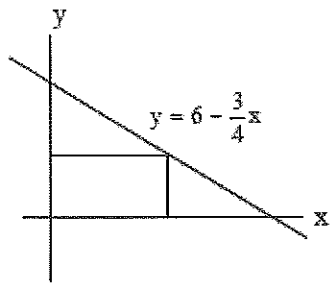
3) An open box with a rectangular base is to be constructed from a 12" by 18" piece of cardboard by cutting out squares from each corner and bending up the sides. Find the dimensions of the box that will have the largest volume.

4) A rectangular package can be sent through the mail only if the sum of its length and girth is not more than 120". Find the dimensions of the box of maximum volume that can be sent if the base of the box is square.

5) A gardener wants to construct 4 garden areas by first building a fence around a rectangular region, then subdividing the region into 4 smaller rectangles by placing 3 fences parallel to one side of the rectangle. What dimensions of the region minimizes the amount of fencing if the total area of the region is 300 square feet?

6) A farmer has 150 feet of fencing and wants to construct 3 pig pens by first building a fence around a rectangular region, then subdividing the region into 3 smaller rectangles by placing 2 fences parallel to one side of the rectangle. What dimensions of the region maximizes the total area?

7) A rectangle is bounded by the x- and y-axes and the graph of $y=6-\frac{3}{4}x$ (see figure). What length and width should the rectangle have so that its area is a maximum?



8) An open box with a rectangular base is to be constructed from a 16" by 21" piece of cardboard by cutting out squares from each corner and bending up the sides. Find the dimensions of the box that will have the largest volume.

Answers

1) $x = 15; y = 15$
2) $x = 25; y = -25$
3) $2.354\ in.\ \times 7.292\ in. \times 13.292\ in.$
4) $20\ in. \times 20\ in. \times 40\ in.$
5) $27.386\ ft. \times 10.955\ ft.$
6) $37.5\ ft. \times 18.75\ ft.$
7) $x = 4; y = 3$
8) $3\ in. \times 10\ in. \times 15\ in.$

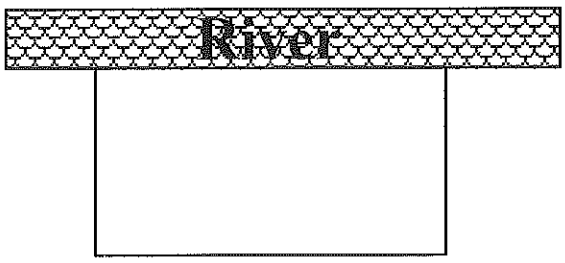
Optimization Problems - Homework

1. Find two numbers whose sum is 10 for which the sum of their squares is a minimum.

2. Find nonnegative numbers x and y whose sum is 75 and for which the value of xy^2 is as large as possible.

3. A ball is thrown straight up in the air from ground level. Its height after t seconds is given by $s(t) = -16t^2 + 50t$. When does the ball reach it maximum height? What is its maximum height?

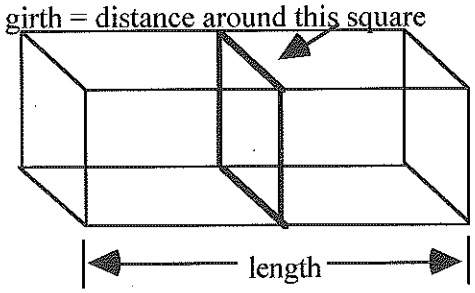
4. A farmer has 2,000 feet of fencing to enclose a pasture area. The field will be in the shape of a rectangle and will be placed against a river where there is no fencing needed. What is the largest area field that can be created and what are its dimensions?



5. A fisheries biologist is stocking fish in a lake. She knows that when there are n fish per unit of water, the average weight of each fish will be $W(n) = 500 - 2n$, measured in grams. What is the value of n that will maximize the total fish weight after one season. *Hint: Total Weight = number of fish • average weight of a fish.*

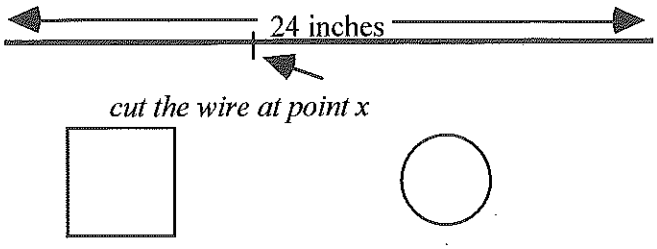
6. The size of a population of bacteria introduced to a food grows according to the formula $P(t) = \dfrac{6000t}{60 + t^2}$ where t is measured in weeks. Determine when the bacteria will reach its maximum size. What is the maximum size of the population?

7. The U.S. Postal Service will accept a box for domestic shipping only if the sum of the length and the girth (distance around) does not exceed 108 inches. Find the dimensions of the largest volume box with a square end that can be sent.



8. Blood pressure in a patient will drop by an amount $D(x)$ where $D(x) = 0.025x^2(30 - x)$ where x is the amount of drug injected in cm^3. Find the dosage that provides the greatest drop in blood pressure. What is the drop in blood pressure?

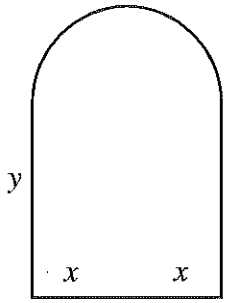
9. A wire 24 inches long is cut into two pieces. One piece is to be shaped into a square and the other piece into a circle. Where should the wire be cut to maximize the total area enclosed by the square and circle?



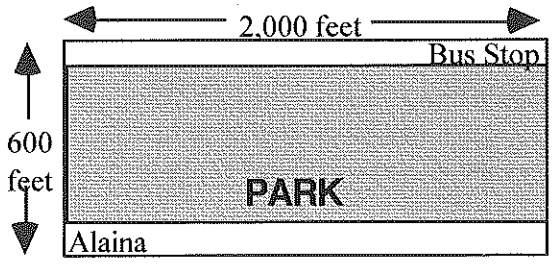
Let x be the point where the cut is made. Assume the square is on the left and the circle on the right. Complete the chart.

x	4	8	12	20	x
Area square					
Area circle					
Total area					

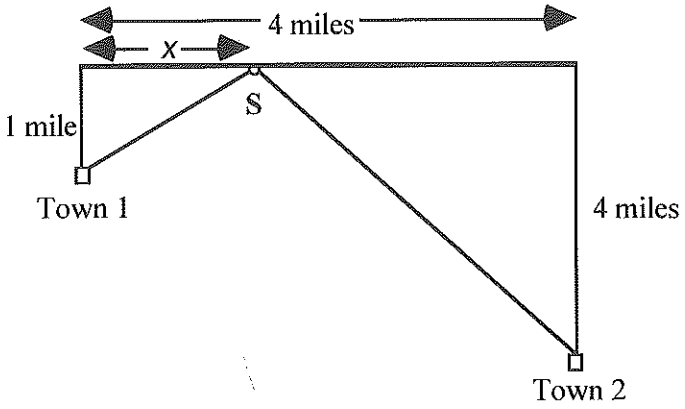
10. A designer of custom windows wishes to build a Norman Window with a total outside perimeter of 60 feet. How should the window be designed to maximize the area of the window. A Norman Window contains a rectangle bordered above by a semicircle.



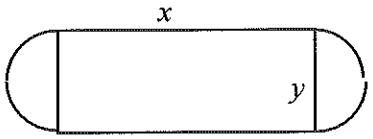
11. Alaina wants to get to the bus stop as quickly as possible. The bus stop is across a grassy park, 2,000 feet east and 600 feet north of her starting position. Alaina can walk along the edge of the park on the sidewalk at a speed of 6 feet/sec. She can also travel through the grass in the park, but only at a rate of 4 ft/sec (dogs are walked here, so she must move with care). What path will get her to the bus stop the fastest.



12. On the same side of a straight river are two towns, and the townspeople want to build a pumping station, S, that supplies water to them. The pumping station is to be at the river's edge with pipes extending straight to the two towns. The distances are shown in the figure below. Where should the pumping station be located to minimize the total length of pipe?



13. A physical fitness room consists of a rectangular region with a semicircle on each end. If the perimeter of the room is to be a 200-meter running track, find the dimensions that will make the area of the rectangular region as large as possible.



Total distance around track = 200 meter

14. Below is the graph of $y = 1 - x^2$. Find the point on this curve which is closest to the origin. (*Remember, you need a primary equation. What is it that you wish to minimize?*)
